OUR KITS

LitLife™ molecular kits

Dried blood spot (DBS) based kits that work from a single finger-prick drop of blood.

Hemoglobinopathies

LitLife™
SCA
Screening and confirmation of Sickle Cell Anaemia

LitLife™
SiBThal217
Diagnosis of Sickle Cell Anaemia and Beta Thalassemia

LitLife™
BThal
Diagnosis of Beta Thalassemia

LitLife™
AlphaThal
Diagnosis of Alpha Thalassemia

Musculopathies

LitLife™
SMA
Screening and confirmation of Spinal Muscular Atrophy

How we partner with you

- Community screening & awareness camps
- Patient, carrier & newborn testing
- Genetic counselling for families
- Lab set-up, training & consultancy

Founded by Dr. Giriraj Ratan Chandak
Former Chief Scientist at CSIR-CCMB and former Director of CDFD, with over 25 years in genetic and molecular diagnostics.

LIGHTENING LIVES
Every Life Matters

GENETIC & MOLECULAR DIAGNOSTICS

Genetic testing that reaches *every community*

Reliable, rapid and affordable diagnostic solutions for hemoglobinopathies and musculopathies, built for NGOs, hospitals and public health programmes.

Reliable
25+ years of molecular diagnostics expertise

Innovative
One-drop sampling and simplified workflows

Affordable
Priced for community-scale screening

Bringing Hope Through Science

01 · HEMOGLOBINOPATHIES

Helping India eradicate inherited blood disorders

Hemoglobin disorders are India's most common single-gene conditions, and most families learn of them only after an affected child is born. Our mission is to help eradicate them through accurate, affordable diagnosis, from first screening to couple counselling.

≈42 million
beta-thalassemia carriers in India

10–15k
babies born with thalassemia major each year

20 lakh+
sickle cell carriers found by the national mission

Our solutions

HbS Sickle Cell Anaemia
Separates carriers from patients; confirms point-of-care positives.

β Beta Thalassemia
Finds carriers and patients often mistaken for iron deficiency.

S/β Sickle Beta Thalassemia
Resolves the compound state often misread as sickle cell disease or trait.

α Alpha Thalassemia
Detects common gene deletions that routine screening misses.

HbE Hemoglobin E
Vital in eastern and north-eastern India; flags HbE/beta-thalassemia risk.

HbD Hemoglobin D (Punjab)
Common in Punjab and Gujarat; resolves HbS/HbD look-alikes.

For every stage of care Patients · Carriers & families · Newborn

02 · MUSCULOPATHIES

Earlier answers for inherited muscle disorders

Children with muscle disorders are often thought to be weak or undernourished, and families wait years for a diagnosis. Our mission is to help eradicate these disorders by bringing molecular diagnosis and carrier testing within reach of every family.

1 in 1,400
male births affected by DMD or SMA

1 in 30–38
Indians carry an *SMN1* exon 7 and/or exon 8 deletion

48–64%
of mothers of boys with DMD are carriers

Our solutions

SMA Spinal Muscular Atrophy
SMN1 and *SMN2* testing for diagnosis, carrier screening of parents and siblings, and disease-severity insight.

DMD Duchenne Muscular Dystrophy
Molecular diagnosis of affected boys, with carrier testing for mothers and siblings.

LGMD Limb-Girdle Muscular Dystrophy
Molecular confirmation that ends diagnostic uncertainty and guides family counselling.

BUILT AROUND YOUR NEED
We develop and validate new tests on requirement: custom panels for a community, a disorder or a screening programme.

UNDER DEVELOPMENT
- Blood Coagulation Panel Testing
- Pharmacogenomics Testing
